# The River Nile

## Geology, Hydrology and Utilization

Rushdi Said

Consulting Geologist, Formerly  
Head of The Geological Survey of  
Egypt, 3801 Mill Creek Drive,  
Annandale, VA 22003-2330, USA

This multidisciplinary book by the author of *The Geology of Egypt* is the result of many years of research. It attempts to reconstruct the history of the River Nile from its origins to its present shape and regimen and also to ascertain the amount of water which has been carried by the river during the course of its history. It examines the manner in which this water was utilized in the past and the ways in which it will have to be used in future if the inhabitants of the river basin are to cope with their anticipated needs.

Part One traces the geological history of the Nile from the time it started to excavate its valley some six million years ago until the present shape was assumed during the wet period which affected Africa after the retreat of the ice of the last glacial age some 10,000 years ago. Part Two deals with the amount of water that the river and its tributaries carry at present and have carried in the past. Part Three discusses the utilization of the water of the Nile from the time of the first appearance of man in the valley until the present time. It traces man's attempt to harness the river from the earliest time to the building of the Aswan High Dam. The book evaluates the effects of the dam after twenty years of operation. Part Four covers the present water supply-demand balance in each basin state and discusses the future plans of these countries to use the waters of the Nile. The rapidly growing populations and the prolonged droughts of recent years have put pressure upon the available waters of the river.

*For geologists, hydrologists, archaeologists, irrigation and water management engineers and Middle East specialists.*

### AIMS AND SCOPE

*Computers & Chemistry* publishes papers in English on all fields relating computers and computational methods to the chemical and biochemical sciences, provided that they make a sufficiently novel contribution to knowledge. Theoretical contributions will be considered equally with papers dealing with experimental work and applications. The journal is a multidisciplinary publication, covering the application of information sciences to topics as diverse as molecular design, molecular recognition, molecular dynamics, pharmacology and pharmaceutical chemistry, molecular biology, solid state modelling, materials sciences, chemical physics, industrial chemistry and chemical engineering.

While the journal is predominantly devoted to research, papers on the development and application of information sciences to teaching and learning in the chemical and biochemical sciences will also be considered, provided they make a significant contribution to knowledge.

### New Editor

**Audience:** Researchers in all areas of Chemistry and Biochemistry interested in the Computer Applications in the Subject.

## CHROMATOGRAPHIA

An International Journal for Rapid Communication in Chromatography and Associated Techniques

Scientific Editors: **T.A. Berger**, Hewlett-Packard Co., 2850 Centerville Road, Wilmington, DE 19808, USA and **H. Engelhardt**, Angewandte Physikalische Chemie, Universität, D-66041 Saarbrücken, Germany  
Technical Editors: **E.R. Adlard**, Delryn, Vicarage Lane, Burton, South Wirral L64 5TJ, UK and **R. Stock**, 23 Highbury Road, Keyworth, Nottinghamshire NG12 5JB, UK  
Special Editor: **L.S. Ettre**, PO Box 2175, Belden Avenue Station, Norwalk, CT 06852, USA

**Audience:** Analytical Chemists.

### AIMS AND SCOPE

Present-day technology makes necessary the rapid exchange of information among professionals in the field of chromatography. Because of the difficulty in solving certain analytical problems quickly and economically using only one of the chromatographic methods, the combined use of varied techniques, such as gas chromatography and mass spectroscopy, yields more exact results. *Chromatographia* is a monthly, international journal that meets the vital demand for the quick spread of accurate, concise information concerning chromatography and related fields. Modern analytical problems place such great demands on the accuracy, sensitivity, speed and economy of the instruments that they can only be solved by close cooperation between theorists, users and instrument manufacturers, and to this end *Chromatographia* permits the rapid exchange of information.
